

Technology alone will not save you. **But your people might.**

The Safelight Difference

The depth and breadth of our security knowledge and experience is unmatched among training companies. Security is not one-size-fits-all and we are uniquely positioned to understand what security means for your organization.

We speak the language—a few in fact! Development, IT, security, lines of business—they all speak a different language and come to security with different perspectives, biases and (sometimes) misconceptions. We are fluent in the language—and the culture—of each of these groups, making us ideal translators in organization-wide conversations about security.

We are solely focused on education. Unlike security consulting firms that add a day or two of training to their engagements, we are fully dedicated to developing and delivering educational content—whether instructor-led or on-demand.

We are adaptive, flexible and client-focused. Our modular curriculum offers flexibility and we know how to get education programs up and running quickly.

When you look closely at an exposure of valuable information, often you will find its origin in the everyday behavior of people at work.

Is there a person in your organization who is not in a position—every day—to behave in a way that either exposes or protects the valuable information that is in their hands? You have deployed innovative technology to address this information risk. But technology alone is not the whole solution, because no matter how much technology-based defense and offense you have in place, people—actual people—interact with sensitive information. It has always been and will always be so.

Leading organizations are assessing the people side of their information risk and building security education programs that recognize the potential of employees to protect the valuable information that's in their hands. They are cultivating a culture of security across their organizations and it is making a difference.

Safelight is a leader in security education—our integration of deep security expertise and innovative approaches to interactive learning sets us apart. We help organizations build comprehensive education programs that go beyond training to measurably shift the way employees think about the value of information and their role in protecting it. We offer a broad range of instructor-led and on-demand courses for general staff, application development teams and IT operations staff.

Courses-at-a-Glance

-  On-Demand Course
-  Instructor-Led Course
-  Coming Soon

GS Courses

-  Information Security Awareness
-  Information Privacy Awareness
-  Security Awareness for Management

DS Courses

-  Introduction to the Secure Software Development Lifecycle (S-SDLC)
-   Application Security Fundamentals
-   Secure Java Coding
-   Secure .NET Coding
-  Secure Web Coding
-   Secure C/C++ Coding
-  Architecting Secure Systems
-  QA Testing for Secure Applications
-  Language-neutral Secure Coding

IT Courses

-  Security 101 for System Administrators
-  Database Security Fundamentals
-   Infrastructure Security Fundamentals

Courses for General Staff

Security is every employee's responsibility. General staff across marketing, human resources, sales, operations, legal, finance and customer service handle personally identifiable information, payment information, protected health information, intellectual property, confidential company plans and financials. Many of these people carry this sensitive information into the world outside the office on laptops, mobile phones, USB drives and paper—just in the course of doing their work every day.

Security rests in all of these employees' hands in different ways. A misstep by any of one of them could create an opportunity for a motivated attacker. A shift in the way employees think about and protect sensitive information can be a company's best protection. Safelight's on-demand and instructor-led courses for general staff are designed to reduce your organization's information risk by increasing security awareness among your business staff.

Courses for Development Staff

By identifying and resolving vulnerabilities early in the software development lifecycle, your team can substantially—and cost-effectively—reduce information risk. Only recently have companies begun to meaningfully integrate security into the software development lifecycle. Secure coding has been greatly advanced by the adoption of formal software security assurance methodologies. Essential to the successful implementation of these methodologies is role-specific training for all development staff—whether they are architects, developers, QA testers or managers.

Our courses for development teams begin with an overview of fundamental secure coding principles. Students learn the many ways in which vulnerabilities in software code may be exploited by attackers and are shown the value of secure development. Building on this understanding of the risks inherent in software development, students learn solid architecture, design, testing and implementation principles. From there, they explore ways to root out security issues within existing systems and how to effectively respond to evolving security threats.

Courses for IT Staff

Employees who are on the front lines of deploying, managing and securing information technology must be well-equipped to protect sensitive information. We provide role-specific on-demand and instructor-led security training programs to help your entire information technology team—from system architects to database administrators—deploy, maintain and protect the enterprise infrastructure.

On-Demand Delivery

All of Safelight's courses are SCORM 1.2-compliant. Courses can be integrated into a client's Learning Management System or delivered as an on-demand service through Safelight's education portal.

Customization

Both instructor-led and on-demand courses can be customized to meet the specific requirements of each client. Clients can customize any course by modifying or removing standard content and/or adding custom content.
